

Silicon carbide Power MOSFET 1200 V, 12 A, 520 mΩ (typ., $T_J = 150$ °C) in an HiP247™ package

Features

- Very tight variation of on-resistance vs. temperature
- Very high operating junction temperature capability ($T_J = 200$ °C)
- Very fast and robust intrinsic body diode
- Low capacitance

Applications

- Solar inverters, UPS
- Motor drives
- High voltage DC-DC converters
- Switch mode power supplies

Description

This silicon carbide Power MOSFET is produced exploiting the advanced, innovative properties of wide bandgap materials. This results in unsurpassed on-resistance per unit area and very good switching performance almost independent of temperature. The outstanding thermal properties of the SiC material, combined with the device's housing in the proprietary HiP247™ package, allows designers to use an industry-standard outline with significantly improved thermal capability. These features render the device perfectly suitable for high-efficiency and high power density applications.
